TRIVENI WIRES PVT. LTD.

PROPOSED ERP SCOPE

One operation. Connected modules.

Custom manufacturing ERP
Module catalogue & rollout framework

16 MODULES / ONE CONTROLLED FLOW

Sales and procurement. Material and production. Quality and dispatch. Finance and insight.

A discussion baseline for defining what to build, what to integrate and what to phase later.

CLIENT DISCUSSION

28 October 2026

All module capabilities and phase assignments are proposed.
Internal workflows and implementation scope require client approval.

01 / SCOPE AT A GLANCE

The full proposed ERP landscape.

Sixteen connected modules. Final inclusion depends on discovery and client priorities.

01 Administration & access
CORE

02 Product & process masters
CORE

03 CRM & sales
CORE + EXPAND

04 Procurement & subcontracting
CORE IF USED

05 Inventory management
CORE

06 Production planning
CORE + EXPAND

07 Manufacturing execution
CORE

08 Quality management
CORE

09 Warehouse & packing
CORE

10 Dispatch & logistics
CORE

11 Finance & accounting
CORE INTERFACE

12 Costing & profitability
BASELINE + EXPAND

13 Maintenance management
EXPAND

14 HR & payroll
OPTIONAL

15 Reporting & management MIS
CORE + EXPAND

16 Integrations & automation
AS REQUIRED

HOW TO READ THE PHASE LABELS

Core: minimum scope for the selected pilot. Expand: deeper capability after validation. Optional: include only by agreement. As required: essential interfaces may be needed from day one.

Inventory owns quantity and status; warehouse owns location and packing. Planning releases work; execution records actuals. Finance owns accounting policy; costing uses agreed production data.

02 / MODULE DETAILS

Commercial & control

Establish consistent masters, permissions and commercial commitments.

01 Administration & access

CORE

Control who can view, enter, approve and change ERP records.

Users, departments and roles; approval limits; audit history; document numbering; configuration and access reviews.

Validate: Confirm users, locations, approval owners and separation of duties.

02 Product & process masters

CORE

Create consistent definitions for Triveni's products and manufacturing.

Item families; diameter and gauge system; coating mass; tolerances; packing; units; customer specification revisions; BOMs and route versions.

Validate: Validate active products, approved specifications and unit conversions.

03 CRM & sales

CORE + EXPAND

Convert customer requirements into controlled commercial commitments.

Enquiries, quotations, customer pricing, sales orders, credit approvals, delivery schedules, amendments and returns; dealer follow-ups later.

Validate: Confirm sales channels, pricing approvals and order tolerances.

04 Procurement & subcontracting

CORE IF USED

Purchase material and manage external processing with traceable receipts.

Requisitions, supplier quotations, purchase orders, receipts, shortages, supplier returns; job-work issues, receipts, balances and charges.

Validate: Identify purchased inputs, outsourced stages and supplier acceptance rules.

03 / MODULE DETAILS

Material & manufacturing

Plan and record production using verified routes and actual material movements.

05 Inventory management

CORE

Maintain accurate quantities across raw material, WIP, finished goods and scrap.

Actual weight and package count; lot/coil identity; reservations; partial issues; transfers; stock counts; quality status and adjustment approvals.

Validate: Agree stock identity, valuation handoff and count procedures.

06 Production planning

CORE + EXPAND

Translate demand and stock availability into executable production orders.

Material requirements, route selection, work orders, machine/shift allocation, shortages and rescheduling; advanced capacity planning later.

Validate: Confirm make-to-order versus stock production and machine constraints.

07 Manufacturing execution

CORE

Record material transformation at each verified production stage.

Job cards; input/output weights; machine, operator and shift; split/merge genealogy; downtime; scrap; rework; order closure and variances.

Validate: Validate each family's route and balance metal, coating additions and loss.

08 Quality management

CORE

Control acceptance and release using approved product specifications.

Incoming, in-process and final inspections; sample plans; results; holds; rejection; rework and concessions; test certificates; complaints.

Validate: Approve test limits, sampling, release authority and certificate formats.

04 / MODULE DETAILS

Fulfilment & financial control

Connect physical delivery with accounting and explainable costs.

09 Warehouse & packing

CORE

Locate and prepare identifiable material for production and dispatch.

Storage locations; coil/bundle/roll labels; put-away and picking; packing specifications; actual package weights; package-to-lot links.

Validate: Confirm storage layout, packaging rules and label equipment.

10 Dispatch & logistics

CORE

Fulfil orders with the right released product, weight and documentation.

Stock allocation; loading checks; vehicle/transporter details; gross, tare and net weight; partial shipments; packing lists and delivery status.

Validate: Agree weight tolerances, dispatch approvals and document ownership.

11 Finance & accounting

CORE INTERFACE

Connect operational transactions to billing, payments and financial control.

Sales/purchase accounting handoff; invoicing; receivables/payables; credit notes; reconciliations and statutory document interfaces as validated.

Validate: Decide integration versus replacement; finance validates tax applicability.

12 Costing & profitability

BASELINE + EXPAND

Understand production cost and margin using agreed allocation rules.

Material, zinc, consumables, labor, energy and subcontract costs; scrap recovery; WIP valuation inputs; standard/actual variance and order margins.

Validate: Agree cost drivers, valuation policies and available measurement data.

05 / MODULE DETAILS

People, assets & insight

Extend the foundation with supporting operations and measured automation.

13 Maintenance management

EXPAND

Improve machine availability and manage maintenance resources.

Asset register; preventive schedules; breakdown tickets; spare parts; service history; tool/die usage where needed; calibration coordination.

Validate: Identify critical assets, maintenance ownership and downtime definitions.

14 HR & payroll

OPTIONAL

Support workforce administration where it belongs within ERP scope.

Employee records; shift rosters; attendance; overtime approvals; labor allocation; payroll integration or payroll processing if commissioned.

Validate: Confirm existing HR tools, privacy/access rules and payroll boundaries.

15 Reporting & management MIS

CORE + EXPAND

Give departments and management one agreed view of performance.

Order backlog; stock/WIP; production by machine/shift; quality holds; yield and zinc variance; on-time dispatch; ageing, costs and margins.

Validate: Define each KPI, baseline, target, data source and responsible owner.

16 Integrations & automation

AS REQUIRED

Reduce duplicate entry and connect approved external systems.

Accounting interfaces; scales/weighbridge; barcode/QR; notifications; lead intake; machine data and portals where supported; error reconciliation.

Validate: Prioritize essential interfaces and confirm APIs, devices and connectivity.

06 / ROLLOUT & ACCEPTANCE

Approve the workflow. Then approve the scope.

Suggested sequencing, subject to factory discovery and a jointly agreed pilot.

01 Discover & define

Approximately two working weeks, subject to access. Confirm sites, routes, units, stock identity, existing tools, integrations and data quality. Deliver the BRD, module decisions and estimate.

02 Pilot the essential flow

Select one product family. Configure masters and access; connect sales, purchase, stock, planning, execution, quality, packing and dispatch with necessary finance interfaces and reports.

03 Expand with evidence

Add remaining routes and sites; deepen costing, scheduling, maintenance, CRM and automation. Include HR/payroll only if commissioned. Scope each release with department owners.

PILOT ACCEPTANCE SCENARIOS

Trace a dispatched package back to its inputs; reconcile actual weight through partial issues and production; block held stock from dispatch; process a rework or rejection; complete a partial delivery; reconcile the agreed accounting handoff.

Client decisions: module owner, include/integrate/defer, pilot boundary, acceptance criteria, data owner and approval date. No final price or delivery commitment is implied by this catalogue.

Basis: Triveni Wires website (triveniwires.com), shared ERP Industry Analysis and project discussions. Website information is preliminary; no operational requirements are client-verified in this catalogue.
